

IN THE CLAIMS

1. (Currently Amended) A remote controller for controlling digital household appliance including at least one device, ~~including a power unit and an input unit~~, the remote controller further comprising:

a radio unit ~~[[for]]configured to operating~~ operate in at least two wireless communication modes;

a control unit ~~[[for]]configured to selecting~~ select one of the at least two wireless communication modes; and

a memory unit,

wherein the control unit selects one wireless communication mode from the at least two wireless communication modes according to control commands inputted by a user, and the radio unit transmits the control commands to the device for controlling operations of the device and/or transmits data stored in the memory unit to the device in the selected wireless communication mode.

2. (Currently Amended) ~~[[A]]~~ The remote controller according to claim 1, wherein the radio unit comprises a low power dissipation radio unit and a high speed transmission unit.

3. (Currently Amended) ~~[[A]]~~ The remote controller according to claim 2, wherein the low power dissipation radio unit ~~is configured to a adapts one of~~ is configured to a ~~wireless commutation protocols~~ protocol including but not limited to Bluetooth protocol, Zigbee protocol and IrDA infrared protocol.

4. (Currently Amended) [[A]]The remote controller according to claim 2, wherein the high speed transmission unit adopts one of wireless communication protocols including but not limited to HomeRF protocol, UWB protocol, IEEE802.11x protocol, IEEE802.11a protocol, IEEE802.11b protocol, IEEE802.11d protocol, IEEE802.11g protocol, IEEE802.15 protocol, IEEE802.16 protocol, IEEE802.3 protocol, GSM protocol, GPRS protocol, CDMA protocol, 2.5G protocol and 3G protocol.

5. (Currently Amended) [[A]] The remote controller according to claim 2, wherein the operation of the low power dissipation radio unit is preset as a default mode.

6. (Currently Amended) [[A]] The remote controller according to claim 1, wherein the control unit selects one corresponding communication mode from the at least two wireless communication modes according to the control commands inputted by the user and/or characteristics of data transmitted by the radio unit.

7. (Currently Amended) A wireless control system for digital household appliance including at least one device, wherein the device is provided with a receiver comprising a memory unit, the system comprising:

a remote controller comprising a memory unit, and for wirelessly transmitting control commands, the remote controller being able configured to operate in at least two wireless communication modes[[:]],

wherein the remote controller selects one wireless communication mode according to control commands to transmit the control commands and/or data stored in the memory unit of the remote controller to the receiver in the selected wireless communication mode, and

~~wherein [[a]]the receiver is configured to receive the control commands and/or the data transmitted by the remote controller and store the data transmitted by the remote controller into the memory unit of the receiver. for receiving and executing the control commands transmitted by the remote controller, and~~

~~wherein the remote controller selects one wireless communication mode from the at least two wireless communication modes according to the control commands to wirelessly communicate with said device or said receiver.~~

8. (Currently Amended) The system according to claim 7, wherein the remote controller further comprises a low power dissipation radio unit and a high speed transmission unit and said remote controller implements said transmits in at least two wireless communication modes ~~by providing and operating [[a]] the low power dissipation radio unit and [[a]] the high speed transmission unit.~~

9. (Original) The system according to claim 8, wherein the low power dissipation radio unit and the high speed transmission unit are switchable under the control of a control unit.

10. (Original) The system according to claim 8, wherein the low power dissipation radio unit adopts one of wireless commutation protocols including but not limited to Bluetooth protocol, Zigbee protocol and IrDA infrared protocol.

11. (New) The remote controller according to claim 1, further comprising an interface unit, wherein the remote controller is configured to access external memory via the interface unit.

12. (New) The remote controller according to claim 11, wherein the radio unit is configured to transmit data accessed from the external memory.

13. (New) The system according to claim 7, wherein the receiver is configured to operate in at least two wireless communication modes.

14. (New) The system according to claim 8, wherein the receiver is configured to select one wireless communication mode according to the selected wireless communication mode of the remote controller.

15. (New) The system according to Claim 7, wherein the remote controller further comprises an interface unit, and the remote controller is configured to access external memory via the interface unit.

16. (New) The system according to Claim 15, wherein the remote controller is configured to transmit data accessed from the external memory.
